

# Westminster cycle grid

London

For 18 months, mode transport planning has been provided support to Westminster City Council. This has included the development and design of a section of the central London Cycle Grid, part of the Mayor of London's Vision for Cycling.

Client:

City of Westminster

# Westminster cycle grid

Development and design for the Mayor of London's vision for cycling.

mode's tasks involved developing initial feasibility designs for a number of cycle routes within Westminster. We were then involved in the technical design reviews of emerging cycle schemes. Our role then moved on to the review and development of the conversion of one-way streets to two-way operation for cyclists in Westminster. Additionally, we were involved in the analysis of the results of the consultation on a cycling strategy for Westminster. Finally, we were engaged in liaison with Transport for London and the Department for Transport on best practice and emerging initiatives.

## Specifically, this work involved:

- + travel plans
- + accessibility studies
- + sustainable transport studies
- + healthy streets assessment
